

WHY INCORPORATE CARBON FIBER REINFORCEMENT? INTO STRUCTURAL SOLUTIONS

STRENGTH

the ability to obtain
the solution not obtainable
through traditional methods.

UPGRADES + REPAIRS OF EXISTING STRUCTURES

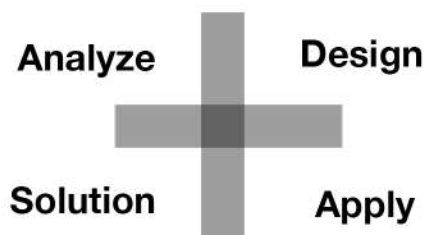

Heavier load demands, environmental damages, deficiencies in the structure, and errors in design all demand structural strengthening.

CARBON FIBER REINFORCEMENT

Provides high strength, light weight, cost effective solutions performed in a fraction of the time compared to traditional strengthening methods.

Composites in the form of fabric sheets and epoxy adhesive create strength up to 10x that of steel.

The Key To Success

A growing percentage of structures are seeing increased demand for repair and support.

DELTA STRUCTURAL TECHNOLOGY

A leader in carbon fiber design
providing solutions for existing structures.

Delta integrates seamlessly into your solutions offering your team unique and innovative answers, resources, support, and application:
